

# **COMPLETE INFORMATION , GUIDELINES AND GUIDANCE FOR AUTHORS AND REVIEWERS**

## GUATEMALAN SCIENTIFIC JOURNAL OF DENTISTRY POSTGRADUATE DENTISTRY, USAC

The Guatemalan Scientific Journal of Dentistry of the School of Postgraduate Studies of the Faculty of Dentistry of the University of San Carlos of Guatemala (USAC) is an academic journal, refereed by professional peers and researchers, double-blind and external to the publishing entity, is open access and has national and international coverage.

The main objective is to publish unpublished articles related to Dentistry and its different areas of knowledge, in addition to providing a space for academic and scientific dissemination under the criteria and rigor dictated by science, technology and international publishing standards, based on the [COPE code of ethics](#).

Among the articles that can be published in the journal are: original research articles, essays clinical consort type randomized trials, systematic review articles, basic clinical research (biology and technology), case reports/clinical techniques, interviews, congress summaries, tributes, an editorial, etc. (see details in: types of articles that can be published in the magazine).

### OPEN ACCESS POLICY

The Guatemalan Scientific Journal of Dentistry adheres to the different initiatives that promote free access to knowledge, the journal has no charges for reading, review or publication of articles and people internal and external to our publishing entity can publish in it, articles in Spanish or English are accepted. The journal will be published digitally and in print.

The international [Creative Commons 4.0 license](#) and the copyright and related rights law of Guatemala will be used for the protection of content and copyright, in addition to the Open Journal System (OJS) created by [Public Knowledge Project](#) (PKP) for the operationalization, administration and publication of the journal.

Likewise, the journal will be associated with [Crossref](#), an international non-profit association for, among other things, the management of the journal's metadata. Together, the Turnitin © application or program will be used to detect the similarity index (anti-plagiarism application or program), establishing a maximum coincidence tolerance of 25%.

The Guatemalan Scientific Journal of Dentistry is published semi-annually by the Postgraduate School of Dentistry of the University of San Carlos de Guatemala, since 2022.

## TARGET AUDIENCES

The target audience for the journal is the dental community, with content produced by professors, students, researchers, and dentists, both from the University of San Carlos of Guatemala, and from other academic institutions in the country or internationally.

## IMPACT FACTOR

In the future it will be established according to [© Clarivate Analytics Journal Citation Reports](#)

## EDITORIAL BOARD

Editor

Dr. Carlos Alvarado-Barrios, University of San Carlos of Guatemala, Guatemala

Section Editors :

Dr. Leopoldo Raúl Vesco Leiva, University of San Carlos of Guatemala, Guatemala

Dr. José Luis Campos de León, University of San Carlos of Guatemala, Guatemala

Dra. Lorena Jannet Teos Recinos, University of San Carlos of Guatemala, Guatemala

Dr. Bruno Manuel Wehncke Azurdía, University of San Carlos of Guatemala, Guatemala

# GUIDELINES AND GUIDELINES FOR AUTHORS AND REVIEWERS

## INTRODUCTION

The Guatemalan Scientific Journal of Dentistry belongs to the Postgraduate School of Dentistry, USAC. Submitted manuscripts must be related to Dentistry and must be original articles (for example: scientific articles resulting from research, clinical trials, basic science related to the biological aspects of dentistry, basic science related to the techniques of dentistry, case reports or review articles related to the scientific or applied aspects of dentistry).

Clinical studies that use methodologies according to the [international organization CONSORT](#) CONSolidated Standards Of Reporting Trials, are especially recommended. Authors should provide the CONSORT checklist accompanied by a flowchart illustrating the progress of patients through the trial. And systematic reviews that use meta-analyses, it is recommended that they follow the guidelines of the Cochrane manual of systematic reviews of interventions, according to the [Cochrane international organization](#).

Manuscripts submitted for publication must be sent exclusively to the Guatemalan Scientific Journal of Dentistry (<https://www.odontologiagt.org/index.php/revista/about/submissions>). They should not be sent for consideration elsewhere or published in any media. For help or queries about the guide for authors or manuscripts, contact [revistacientifica@postgradosodontologia.edu.gt](mailto:revistacientifica@postgradosodontologia.edu.gt), this journal does not charge fees for submission, review or publication of scientific articles.

Requirement and attest to the originality of the articles: each author signs a letter of originality, where he attests to the originality of the articles he is presenting. This support document will remain in the custody of the editorial committee.

Your manuscript must be an editable digital document, including text, figures and /or tables, or you can submit it in separate digital documents, as the author prefers. It must include all the required sections, the minimum ones are: title, abstract, keywords (the previous 3 must be sent in Spanish and English), introduction, materials and methods, results, discussion, conclusions and bibliography. The figures and/or tables must have a title and a legend, they must also have their respective number sequence. Figures should be submitted in the highest resolution possible. References can be submitted in any style or format, as long as it is consistent throughout the manuscript and in a single format, [APA 7ma. Edition](#) or [Vancouver](#) format is strongly recommended. Either, you do not need to format the references in your manuscript, instead, the typographer will take care of this. Supporting information must be submitted on separate digital documents .

It is necessary to have an identification of the international organization Open Researcher and Contributor ID, ORCID for its acronym, available free of charge at [orcid.org](http://orcid.org). This is a global non-profit organization, this is important because ORCID provides a permanent digital identifier (an ORCID iD) that is owned and controlled by you and distinguishes you from any other researcher. You can connect your iD with your professional information, such as affiliations, grants, publications, peer reviews, and more. You can use your iD to share your information with other systems, ensuring that you are recognized for all your contributions, saving time, effort, and reducing the risk of errors.

## PEER REVIEW PROCESS

Submissions are initially evaluated by the editor-in-chief and the editorial team. If the manuscripts do not meet the minimum requirements, detailed in the “Checklist for the Preparation of Submissions”, they will be rejected. Likewise, the editor-in-chief can reject submissions that do not belong to the disciplines that the journal includes.

The journal operates with a double-blind peer review policy in which the identity of the peer reviewer and the author is anonymized, the manuscripts are reviewed by expert, external professional peers. The manuscript is sent to two peer reviewers, in case the professional peers disagree regarding the publication or not of the manuscript, it will be sent to a third professional peer. Internal submissions, that is, articles written by editors or members of the journal's editorial board, will be sent to editors not affiliated with the author or institution and will be carefully controlled to ensure that there is no peer review bias. Anonymize your manuscript and provide a cover of your article in a separate digital document, see details below. Arbitration may take some time. Finally, the editor in chief evaluates the recommendations of the peer reviewers, if the manuscript obtains two recommendations for publication, then the article will be published. The editor-in-chief can decide to send the manuscript to another peer reviewer, the decision after the peer review process is final and the author cannot appeal it.

The decisions of the members of the editorial committee to accept or reject a document for publication are based solely on the relevance of the work, its originality and expository clarity, as well as the relevance of the study in relation to the editorial line. It is guaranteed that the material submitted for publication will be considered as reserved and confidential matter while it is being evaluated and, in the case of being rejected, no evaluating member will be able to make the original public. The identity of the evaluators is protected at all times, guaranteeing their anonymity.

## DISCLAIMER

Statements, opinions and advertisements in the Guatemalan Journal of Dentistry belong to and are the sole responsibility of the individual authors, collaborators, editors or advertisers, as indicated. These statements, opinions and announcements do not provide

any responsibility to the School of Postgraduate Studies, the School of Dentistry, the University of San Carlos de Guatemala or their agents, collaborators, publishers, etc. Unless otherwise specified, the Postgraduate School, the School of Dentistry and the University of San Carlos de Guatemala and the publisher disclaim any responsibility or liability for such material.

## COPYRIGHT

Authors who publish in this journal accept the following conditions:

The authors retain the copyright and give the journal the right of first publication, with the work registered with the Creative Commons 4.0 attribution license, which allows third parties to use what is published as long as they mention the authorship of the article work and the first publication in this journal.

Authors may make other independent and additional contractual agreements for the non-exclusive distribution of the version of the article published in this journal (for example: include it in an institutional repository or publish it in a book) provided that they clearly indicate that the work was published for the first time in this journal.

Authors are allowed and encouraged to share their work online (for example: in institutional repositories or personal web pages) before and during the manuscript submission process, as it can lead to productive exchanges, to a greater and faster citation of the published work.

Requirement and attest to the originality of the articles: each author signs a letter of originality, where he attests to the originality of the article he is presenting. This document must be attached in another file at the time of sending, this supporting document will remain in the custody of the editorial committee.

## PRIVACY STATEMENT

The data collected from registered and unregistered users in this journal are included within the scope of the standard operation of peer-reviewed journals. That includes the information necessary to communicate in the editorial process. The information is used to inform readers about the authorship and editing of the content. Likewise, it allows collecting aggregated data on reading behaviors as well as as well as monitoring geopolitical and social elements of academic communication.

The editorial team of this journal uses this data as a guide for the publication and improvement of the magazine. Data that will help improve the publishing platform may be shared with its developer Public Knowledge Project in an anonymous and aggregated

manner, with its own exceptions such as article metrics. The magazine will not sell the data nor will PKP use it for purposes other than those established in this section.

Authors who have authored articles in this journal are responsible for the data on subjects listed in the research here reported.

The people responsible for editing this journal are in compliance with international standards on data privacy, including the clause of "the rights over the data of subjects" of the [General Data Protection Regulation of the European Union](#) (GDPR) which includes (a) data breach notifications; (b) right of access; (c) right to be erased; (d) data portability; and (e) privacy by design. The GDPR also allows recognition of the "public interest of data availability" that is important to those who maintain, with the highest possible integrity, public records of scholarly publications.

## EDITORIAL ETHICS

The publication of articles in this journal constitutes a process of permanent production of knowledge, the journal also considers that it is its duty to ensure the transmission of scientific knowledge, guaranteeing its rigor and quality, under a ethical commitment to the scientific and academic community. The formal component of the academic communication system, that is, the publication of an article in a peer-reviewed academic journal, serves many purposes beyond simple communication. It is a basic component in the development of a coherent and respected knowledge network. It is prima facie evidence of the quality and impact of the research work of its authors and by extension of the institutions that support them. It supports, and is itself an example, of the scientific method. For all these reasons and more, it is important to establish standards of ethical conduct expected by all parties involved in the act of publication: the author, the journal editor, the reviewer, the publishing entity and society. This includes all parties treating each other with respect and dignity and without discrimination, harassment, intimidation or retaliation. The protocols and guidelines described here are good practices of common exercise in publishers of international prestige, in this line the Code of Conduct is taken as a reference that, for editors of scientific journals, has established the Committee Ethics of Publications (COPE).

## Human and Animal Studies

If the work involves the use of human subjects, the author must ensure that the work described has been performed in accordance with the [World Medical Association's Code of Ethics](#) (Declaration of Helsinki) for human experiments. The manuscript must be in line with the [International Committee of Medical Journal Editors](#) (ICMJE) recommendations for conducting, reporting, editing, and publishing academic papers in medical journals and the goal of including representative human populations (sex, age and ethnicity) according to

these recommendations. The terms sex and gender must be used correctly as indicated by the [World Health Organization](#) (WHO).

The authors must include on the cover of the manuscript a statement that they have passed the ethics committee of their institution, this may be that of their academic unit or that of their university or institution, and they must also send in a document attached to the manuscript the letter issued by the ethics committee approving the research. Likewise, the authors must include on the cover of the manuscript, a statement that indicates that informed consent was obtained from the people involved, for experimentation with human subjects. The privacy rights of human subjects must always be observed.

All experiments on animals must comply with the [arrive guidelines](#) of the National Center for the Replacement, Refinement and Reduction of Animals in Research and must be carried out in accordance with the Animals (Scientific Procedures) Act of the European Commission [EU Directive 2010/63/EU](#) for experimentation with animals, or with the [Guide for the care and use of laboratory animals](#) of the United States, authors must clearly indicate in the manuscript that such guidelines have been followed. The sex of the animals and, where appropriate, the influence (or association) of sex on the results of the study should be indicated.

#### DECLARATION OF INTEREST

Authors are asked to identify who provided financial support for the conduct of the research and/or the preparation of the article and briefly describe the role of the sponsor, if any. Each author must disclose any financial and /or personal relationships with other persons or organizations that may influence the author's objectivity. Examples of potential conflicts of interest include employment, consulting, stock ownership, fees, paid expert testimony, patent applications/registrations, and grants or other funds. Authors must disclose any interest in two places: 1. A summary statement of interest in the digital document cover. If there are no interests to declare, indicate the following: "Declarations of interest : none". 2. Detailed disclosure as part of a separate Declaration of Interest digital document, which will form part of the journal's internal official records. It is important that potential interests are declared in both places and that the information matches, more information .

#### SHIPPING DECLARATION AND VERIFICATION

The submission of an article implies that the described work has not been previously published (except in the form of an abstract, published conference or academic thesis, see "[Multiple, redundant or concurrent publication](#)" for more information). Which is not under consideration for publication elsewhere, that its publication is approved by all authors and implicitly or explicitly by the responsible authorities where the work was done, and that, if accepted, it will not be published elsewhere in the same form, in Spanish, English or in any

other language, including electronically without the written consent of the owner of the copyright. To verify originality, your manuscript will be reviewed by the [Crossref Similarity Check originality detection service](#).

## USE OF INCLUSIVE LANGUAGE

Inclusive language recognizes diversity, conveys respect for all people, is sensitive to differences and promotes equal opportunities. The content must not make assumptions about the beliefs or commitments of any reader; not contain anything that could imply that one individual is superior to another on the basis of age, gender, race, ethnicity, culture, sexual orientation, disability, or health status; and use inclusive language at all times. Authors must ensure that writing is free from bias, stereotypes, jargon, references to a dominant culture, and/or cultural assumptions. We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid, we also recommend avoiding offensive terms or exclusive. These guidelines are intended as a point of reference to help identify appropriate language, but are by no means exhaustive or definitive.

## AUTHOR CONTRIBUTIONS

For greater transparency, we encourage authors to submit an author declaration section on the manuscript title page, describing their individual contributions to the paper, using the relevant [CRedit](#) roles, authorship declarations should be formatted with the names of authors first and CRedit functions next. [More details and an example](#).

## Changes in Authorship

Authors are expected to carefully consider the list and order of authors before submitting their manuscript and provide the final list of authors at the time of original submission. Any addition, deletion, or rearrangement of author's names in the authorship list should be done only before the manuscript has been accepted and only if approved by the journal editor. To request such a change, the editor must receive the following from the corresponding author: (a) the reason for the change in the list of authors, and (b) written confirmation (email, letter) from all authors that they agree to the change according to addition, removal or rearrangement. In the case of adding or removing authors, this includes confirmation of the author being added or removed. Only in exceptional circumstances will the Editor consider adding, deleting, or rearranging authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online edition, any request approved by the Editor will result in an a corrigendum or errata.

## SHIPPING

Our online submission system guides you step by step through the process of entering your item details and uploading your documents. The system converts your article documents into PDF documents used in the peer review process. Submission of your manuscript is required to be in editable documents (eg. Word, Pages, Excel, etc.) to compose your article for final publication. All correspondence, including notification of the editor's decision and requests for review by peer reviewers, is sent through the e-mail address of the journal: [revistacientifica@postgradosodontologia.edu.gt](mailto:revistacientifica@postgradosodontologia.edu.gt). Please submit your article via: <https://www.odontologiagt.org/index.php/revista/about/submissions>.

## PREPARATION

### About Composition

Authors are strongly advised to analyze their final draft with either an application or program (for example, spelling and grammar programs), as well as with colleagues who have experience in grammar (Spanish or English). Below you will find some guidelines for writing a scientific article. Always remember that clarity is the most important characteristic of scientific writing. Scientific articles must be clear and precise in their content and concise in their presentation because their purpose is to inform the reader. The Editor reserves the right to edit all manuscripts or to reject those manuscripts that lack clarity or precision or that have unacceptable grammar or syntax.

Authors should be aware that the journal uses iThenticate similarity detection software to ensure the originality and integrity of material published in the journal. The use of copied sentences, even when enclosed in quotation marks, is strongly discouraged. Instead, the information from the original research should be stated in the author of the new manuscript's own words with an appropriate citation at the end of the sentence.

Plagiarism will not be tolerated and manuscripts will be rejected or withdrawn after publication due to unethical actions of the authors. In addition, authors can be sanctioned for future publications.

### Use of Applications or Text Processing Programs

It is important that the document is saved in the native format of the word processor used. Manuscripts can be written in Spanish or English and must be considered a maximum length of 10,000 words, they must be written in paragraphs, maximum of ten lines, the text must be in a single column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced when the item is processed. In particular, do not use the word processor options to wrap text or hyphenate words. However, use bold, italics, subscripts, superscripts, etc. Note that source files for figures, tables, and text

graphics may be required, regardless of whether or not you insert your figures into the text. To avoid unnecessary errors, we strongly recommend that you use the "spelling check" and "grammar check" functions of your word processor.

## INITIAL DOCUMENT OR COVER OF THE MANUSCRIPT

It is a digital document that is delivered separately from the content of the manuscript, this due to the double-blind peer review system that is carried out, it must include:

- Title, this describes the main emphasis of the article, it should be as short as possible without loss of clarity, it should be attractive, so that it describes the content of the article in a specific, clear way while accurate, brief, and concise, headings are often used in information retrieval systems, abbreviations and formulas should be avoided where possible. You can have a maximum of 15 words, the fewer the better.
- The specific academic area of the article.
- Names and affiliations of the authors, clearly indicate the name(s) and surname(s) of each author and verify that all names are spelled correctly. Enter below the profession, academic degree, main occupation, email address, telephone number and institutional affiliation(s) (institution(s) to which you belong or where the work was carried out research) of each author. Under each affiliation indicate the name of the country to which each institutional affiliation belongs.
- Corresponding author, clearly indicate who will handle correspondence at all stages of review and publication, including after publication. This responsibility includes responding to future inquiries.
- Current/permanent address of the corresponding author.
- Declaration of interest, provide the requested details, see declaration of interest section.
- Author declaration, provide the requested information, see author contributions section.
- Declaration of approval of the respective ethics committee, this must indicate that the research has been approved by the ethics committee of your institution, the letter of the committee must be attached in a separate document, it will remain in the custody of the editorial board of the journal.
- Statement indicating that informed consent was obtained from the persons involved, for experimentation with human subjects. The privacy rights of human subjects must always be observed.

## MANUSCRIPT TEXT

It is the digital document that carries all the content of the manuscript, it must include:

-Title in Spanish and English, this describes the main emphasis of the article, it must be as brief as possible without loss of clarity, it must be attractive, so that it describes the content of the article in a specific way, concise, clear, accurate, brief, and concise, titles

are often used in information retrieval systems, abbreviations and formulas should be avoided whenever possible. You can have a maximum of 15 words, the fewer the better.

-Structured abstract of the article in Spanish and English, a structured abstract must provide the context or background for the research, the abstract concisely describes the purpose of the study, it must be organized in sections: introduction, methods, results and conclusions. The hypothesis is described in the introduction of the abstract, the new contributions made by this study should be described, it is important to include the basic procedures (selection of study subjects or laboratory, analytical and observation methods), main findings (giving specific effect sizes and their statistical significance, if possible), and main conclusions. You must emphasize new and important aspects of the study or observations, write the abstract in the past tense because the study has been completed, a maximum of 250 words is accepted.

-Keywords, in Spanish and English, immediately after the abstract, provide a maximum of 7 keywords, avoiding general and plural terms and multiple concepts, do not use abbreviations unless they are firmly established in the matter. These keywords will be used for indexing purposes.

-Introduction, this briefly reviews the pertinent literature to identify the gap in knowledge that the study aims to address and the limitations of previous studies in the area. Clearly describe the purpose of the study, the hypothesis tested, and its scope, and do not conduct an extensive literature review or discuss the study results in this section.

-Materials and methods, this section it is intended to allow other researchers to repeat your experiments. There are 4 components in this section: (1) detailed description of the materials used and their components, (2) experimental design, (3) procedures used, and (4) statistical tests used to analyze the results. Previous studies that used similar methods should be cited and the essential aspects used in the present study should be succinctly described. If the method is novel, you should carefully describe the method and include validation experiments. If the study used a commercial product, the manuscript should state that it followed the manufacturer's protocol or specify any changes made to the protocol. If the study used an in vitro model to simulate a clinical outcome, describe the experiments performed to validate the model or previous literature that demonstrated the clinical relevance of the model. The statistical analysis section should describe what tests were used to analyze the dependent measures; p-values must be specified. Additional details may include randomization scheme, stratification (if applicable), power analysis as a basis for sample size calculation, dropouts in clinical trials, the effects of important distracting variables, and bivariate versus multivariate analysis.

-Results, only experimental results are appropriate in this section; they do not include methods, discussion, or conclusions. Include only those data that are critical to the study, as defined by the objectives. Do not include all available data without justification; Any repetitive finding will be rejected from publication. All figures, graphs and tables must be cited in the text in numerical order and include a title and a brief description of the main findings. Consider using supplemental figures, tables, or video clips to be posted online. Supplementary material is often used to provide additional information or control experiments that support the results section.

-Discussion, in which the results are summarized, interpreted and extrapolated, their implications and limitations are analyzed, and they are confronted with the proposed hypothesis, considering how the perspective of other authors has been. In other words, emphasis is placed on summarized and concise aspects of the study, proposals for future research, comparison with other studies, presentation of the limitations of the study and the possible generalization of the results, of other unanticipated findings and the investigator's interpretation of the results. The discussion of data in scientific articles corresponds to the form of how the results are interpreted by the researcher, both in light of the hypothesis raised, as well as what other authors say or have found on the subject. It is about elucidating what the results mean and why they were obtained.

-Conclusions, here the results that answer the research questions are explicitly shown and the fulfillment or not of the objectives is highlighted.

-Future Perspectives, provides a vision of where the approach of the proposed problem is located within the field of knowledge and where the research can be directed, likewise it provides an idea of future fields to explore or investigate.

-Acknowledgments, if any, should go at the end of the article before the bibliographical references, number here the people or institutions that provided help during the investigation. Any potential conflict of interest must be disclosed, add a paragraph to the manuscript that fully discloses any conflicting financial or other interest, all sources must be disclosed, and all grants, contracts, or donations must be attributed who financed the study. If there are no conflicts of interest, the article is usually concluded with the statement: The authors deny any conflict of interest related to this study.

-Bibliographic references, references can be sent in any style or format, as long as it is consistent throughout the manuscript and in a single format, APA 7th. Edition or Vancouver format is strongly recommended. The journal reserves the right to change the reference style or format according to their convenience or universality, with the intention of facilitating their use, reference or reading. There are no limits on the number of references, but the manuscript must have a minimum of 15 bibliographic references.

Figures, there are 2 general types of figures: type 1 includes photographs, radiographs or micrographs; type 2 includes graphics. Type 1: Include only essential figures and use composite figures containing multiple photo panels, if possible and necessary. Each panel must be clearly identified with a letter (for example, A, B, C), and the parts must be defined in the figure legend. A figure containing many panels counts as one figure. Type 2: Charts (ie, line drawings including bar charts) that plot a dependent measure (on the y-axis) as a function of an independent measure (usually plotted on the x-axis). Use graphs when the general trend of the results is more important than the exact numerical values of the results. These must be at the highest possible resolution, if the figures do not have a good resolution, the manuscript will be analyzed for publication or not. All necessary copyright permissions for the reproduction of graphic elements used in the images must be obtained and indicated, likewise the content of the illustrations or graphics must not show open advertising of products, if encourage educational presentations. As far as possible, the

data that give rise to figures must be attached to the corresponding tables, as an attached document.

Tables are appropriate when it is essential to present exact numerical values; however, it is not necessary to put all the results in a table, you can include the specific results that demonstrate the situation, the more specific and concise the tables are, the better they will convey the information. Send the tables as editable text and not as images, number the tables consecutively according to their appearance in the text and place the notes of the table below the body of the table, they must have a title and legend, be moderate in the use of tables and make sure that the data presented in them do not duplicate the results described in other parts of the article. Avoid using vertical rulers and shading in table cells, if the results are not significant, it is probably not necessary to include the results in a table.

## TYPES OF ARTICLES THAT MAY BE PUBLISHED IN THE MAGAZINE

### Original Research Article

These should describe experimental observations that are significant, original, and provide sufficient details so that the observations can be evaluated critically and, if necessary, repeat. Original items must meet the highest international standards in the field or professional area.

### CONSORT Randomized Clinical Trial

Must strictly adhere to the Consolidated Standards of Trial Reporting (CONSORT) minimum guidelines for publication of randomized clinical trials (<http://www.consort-statement.org>).

### Review Article

Be it narrative articles or systematic reviews/meta-analyses. Reviews should generally include a clearly defined search strategy and take a broad view of the field rather than simply summarizing the literature. Systematic reviews are recommended to follow the PRISMA guidelines. Systematic reviews that use meta-analyses, it is recommended that they follow the guidelines of the Cochrane manual of systematic reviews of interventions, according to the [Cochrane international organization](#).

### Clinical research

Prospective or retrospective studies of patients or patient registries, randomized controlled trials, cohort studies, case-control studies, cross-sectional studies, case series, biopsy research excluding the use of human teeth for technique studies.

### Basic Biological Research

Animal or culture biological research studies on physiology, development, stem cell differentiation, inflammation, or pathology. The main focus is in biology.

### Basic Research Technology

Focus mainly on research related to the techniques and materials used, or their potential clinical use.

### Case Report / Clinical Techniques

Reports of an unusual clinical case or use cutting edge technology in a clinical case. Case Report/Clinical Techniques articles, even if they include an extensive review of the literature, are categorized as Case Report / Clinical Techniques.

### Interviews

They are manuscripts in which the publishing entity conducts an in depth interview with a relevant personality of national or international dentistry. It is based on the formulation of questions and their respective answers on a general or specific topic, it concludes with the position of the interviewee and the editorial committee on the topic analyzed during the interview. They will have a maximum length of 7,000 words, as well as a minimum of 5 bibliographic references.

### Congress Summaries

This section is for conference abstracts, all submitted papers will be reviewed by the journal editor, they will not be peer reviewed. You must contact the magazine to see the submission format. These documents will present a summary of the different topics and conferences given in an institutional academic activity, also providing the pertinent conclusions of the different conferences or academic activities carried out.

### Documents of Interest

This section is to send documents that are important or of interest to the university community or society. All submitted papers will be reviewed by the journal editor, they will not undergo peer review, you must contact the journal to see the submission format, this section is intended to be a scientific repository of classic papers. physical or very important for the development of dentistry.

### Tributes

This section is for the tributes made by the Dentistry Postgraduate School, the Faculty or the University, and that the journal's publishing entity considers its publication, dissemination and archiving through the journal to be important. All tributes sent to this section will be evaluated by the journal's editorial committee, they will not be subject to peer review, you must contact the journal to see the presentation format.

### Relevant information from the Faculty of Dentistry

This section is to publicize relevant information from a School of Dentistry. It may include scientific information, statements, awards, achievements or goals achieved. All the information sent will be evaluated by the editorial committee of the journal, it will not be subjected to peer review, you must contact the journal to see the presentation format.

## GENERALITIES FOR ALL MANUSCRIPTS

Measurement units, follow internationally accepted rules and conventions: use the international system of units (SI). If other units are mentioned, indicate their equivalent in SI, the International System of Units is based on seven basic units corresponding to the magnitudes of length, mass, time, electric current, temperature, amount of matter, and luminous intensity.

For dental nomenclature, it is recommended to use the international FDI system, the Universal, Palmer and Haderup nomenclature systems are also accepted.

Regarding abbreviations, when the terms are not standard that appear 3 or more times in the manuscript must be abbreviated, when used for the first time they must be written completely in the text with the abbreviation in parentheses.

Sources of financing, list the sources of financing, it is not necessary to include detailed descriptions about the program or the type of scholarships and awards, when the funding comes from a block grant or other resources available to a university, college or other research institution, send the name of the institute or organization that provided the financing. If funding has not been provided for the research, it is recommended that the following sentence be included: This research did not receive any specific grants from funding agencies in the public, commercial, or non-profit sectors.

### Final product

-Be sure to use consistent fonts and sizes in your original manuscript, we recommend using the following fonts and font sizes: Arial, Courier or Times New Roman, size 12.

-Figures and tables must be numbered respectively, according to their sequence in the text, all figures and tables must have their respective titles and legends. Make sure color images are accessible to everyone, including people with color vision impairments, and we reiterate that they are submitted at the highest possible resolution.

-Formats, if your manuscript is created in a Microsoft Office application (Word, PowerPoint, Excel), then provide "as is" in the original document format. Regardless of the application used other than Microsoft Office, when your manuscript is finished, convert all images to one of the following formats (note the resolution requirement for line art, halftone (grayscale), and line/halftone combinations listed below):

EPS (or PDF): vector drawings, embed all fonts used.

TIFF (or JPEG): color or grayscale (halftone) photos, keep a minimum of 300 dpi.

TIFF (or JPEG): Bitmap line drawings (pure black and white pixels), keep a minimum of 1000 dpi.

TIFF (or JPEG): bitmap/halftone (color or grayscale) line combinations, keep to a minimum of 500 dpi.

Please do not send:

Files optimized for screen use (eg. GIF, BMP, PICT, WPG); These usually have a low pixel count and a limited set of colors, or files that have too low a resolution, or submit graphics that are disproportionately large for the content.

#### Bibliographic references

Make sure that all references cited in the text are also present in the reference list (and vice versa), any references cited must be complete. All bibliographic references that have DOI numbers must carry their respective DOI number, preferably in the form of a link. Unpublished results and personal communications are not allowed in the reference list, but may be mentioned in the text. The citation of a reference as “in press” implies that the article has been accepted for publication, this situation is different from preprints, which are manuscripts that have not yet been accepted for publication.

Referral links, online links to cited sources ensure higher research visibility and high-quality peer review. To allow us to create links to abstracting and indexing services, such as Scopus, CrossRef and PubMed, please ensure that the data provided in the references is correct. Please note that incorrect last names, journals/book titles, year of publication, and pagination may prevent linking. When copying references, be careful as they may already contain errors. The use of the DOI is strongly recommended. A DOI is guaranteed never to change, so you can use it as a permanent link to any electronic article.

Web references, at a minimum, provide the full URL and the date the reference was last accessed. Any additional information should also be provided, if known (DOI, author's names, dates, reference to a source publication, etc.). Web references are included in the reference list.

Data References, this journal encourages you to cite underlying or relevant data sets in your manuscript by citing them in your text and including a data reference in your reference list. Data references should include the following elements: author name(s), dataset title, data repository, version (when available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can correctly identify it as a data reference. The identifier [dataset] will not appear in your published article.

Preprint references, when a preprint is later available as a peer-reviewed publication, the formal publication should be used as a reference. If there are preprints that are foundational to your work or that cover crucial developments in the topic, but have not yet been formally published, these can be referenced. Preprints must be clearly marked as such, for example by including the word preprint or the name of the preprint server, as part of the reference. The DOI of the pre print must also be provided.

References in a special issue, be sure to add the word “this special issue” to any listed references (and any in-text citations) to other articles in a special issue of a given journal or information source .

Reference management applications or programs, with these programs, authors only need to select the template or citation style requested by the journal when preparing their article, after which the citations and bibliographies it will be automatically formatted in the journal style. If you do not use a reference management application or program, which is very pertinent, it is recommended to follow the APA 7a format. Edition, or Vancouver , if you use a reference management program, be sure to remove all field codes before submitting the electronic manuscript , you can learn more about how to [remove field codes from different reference management applications or programs](#).

Journal abbreviations, journal names are abbreviated according to the Index medicus.

Video, video material and animation sequences are accepted to support and enhance your scientific research. Authors who have video or animation files they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table, by referencing the content of the video or animation. All submitted files must be properly tagged so that they directly relate to the content of the video file. To ensure that your video or animation material can be used directly, please provide the file in one of our recommended file formats with a maximum size of 150MB per file, 1GB total. The video and animation files provided will be published online in the electronic version of your article. Provide "still images" with your manuscripts: you can choose any frame from the video or animation or make a separate image. These will be used instead of the standard icons and will customize the link to your video data. Note: Since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and print versions for the parts of the article that refer to this content. Video content should not display overt product advertising, educational presentations are encouraged.

Supplementary material, such as applications, images and sound clips can be published with your article to enhance it. Submitted supplemental items are posted exactly as received (Excel or PowerPoint files will appear as such online). Submit your material along with the article and provide a concise, descriptive title for each supplemental file. If you wish to make changes to the supplemental material during any stage of the process, please be sure to provide an updated file. Do not record any fixes in a previous version. Turn off the “track changes” option for Microsoft Office files, as these will appear in the published version.

Research Data, this journal encourages and enables you to share data that supports the publication of your research where appropriate, and allows you to interrelate the data with your published articles. Research data refers to the results of observations or

experimentation that validate the research findings. To facilitate reproducibility and reuse of data, this journal also encourages you to share your applications or software, code, models, algorithms, protocols, methods, and other useful materials related to the project.

Data link, if you have made your research data available in a data repository, you can link your article directly to the dataset, to promote transparency, we encourage you to indicate the availability of your data in your shipment. If your data is not available for access or not suitable for publication, you will have the opportunity to indicate why during the submission process, for example by stating that the research data is confidential. The statement will appear with your published article.

## CLAIMS

The Guatemalan Scientific Journal of Dentistry is committed to responding quickly to the complaints received. In any case, if the interested parties are unable to satisfy their claims, it is considered that they are within their right to submit their protests to other instances.

Any author, reader or evaluator can send their complaints or reports through the journal's email: [revistacientifica@postgradosedontologia.edu.gt](mailto:revistacientifica@postgradosedontologia.edu.gt).

## MONITORING OF BAD PRACTICES

The Guatemalan Scientific Journal of Dentistry assumes its obligation to act accordingly in case of suspicion of bad practices or inappropriate behavior, manuscripts that raise doubts about possible bad behavior will be rejected, and all reasonable efforts to ensure that the work submitted for evaluation is rigorous and ethically appropriate.

## AFTER ACCEPTANCE

Proofs, a set of page proofs (as PDF files) will be emailed to the corresponding author or a link will be provided in the email so authors can download the files themselves. Use this test only to check typesetting, editing, completeness, and correctness of text, tables, and figures. Significant changes to the article accepted for publication will only be considered at this stage with the permission of the Editor. We will do our best to get your article published quickly and accurately; Send us all your corrections within 48 hours of receiving these proofs. It is important to ensure that all corrections are sent to us in one communication: please check carefully before replying, as subsequent corrections cannot be guaranteed. The review is solely your responsibility. Please note that the journal may continue to publish your article if no response is received.

Accepted manuscripts, they are first published in the “in print” section on the web portal of the journal, shortly after acceptance and before the edition or composition of the printed version of the journal, in PDF format. After the final version of the journal volume is

available, the print version of the journal will be published and at the same time the accepted articles will move from the “in print” section to the “current volume” of the journal section.

In cases where authors wish to change their name after publication, this can be done, the article will be updated and republished, updated metadata will be resubmitted to indexing services. Our editorial and production teams will use discretion, recognizing that name changes may be sensitive and private in nature for a number of reasons, including (but not limited to) alignment with gender identity or as a result of marriage, divorce or religious conversion. Consequently, to protect the author's privacy, we will not post a correction notice to the article and will not notify co-authors of the change. Authors must contact the editorial office of the journal with their name change request, which must be duly explained and justified, attached must send their personal identification document, name changes can only be made strictly in a personal way.

The magazine will allow the correction of authorship by the authors, if there is a valid reason to do so. All authors, including those added or removed, must agree to any proposed changes. To request a change in the list of authors, contact the publisher or journal production.

## INTEGRITY AND ACADEMIC RIGOR

Whenever any published work becomes known to contain material inaccuracies, misleading or distorted statements, it must be corrected immediately. If any work whose content is fraudulent is detected, it will be removed as soon as it is known, immediately informing both readers and indexing systems.

## FILING AND DIGITAL PRESERVATION POLICY

The Guatemalan Scientific Journal of Dentistry allows self-archiving of accepted and published manuscripts. Authors retain copyright ownership and may archive pre-published or post-published versions, or pdf versions, in personal or institutional repositories or libraries whenever they wish without the express permission of the journal. The authors of articles published in the Guatemalan Scientific Journal of Dentistry, have the right to deposit the accepted or published versions of the manuscripts in institutional repositories. Authors can make them publicly available immediately once the journal is mentioned as the site where they were originally published.

The Guatemalan Scientific Journal of Dentistry participates in the digital preservation of the [Public Knowledge Project Private LOCKSS Network](#) (PKP PLN) that allows long-term digital preservation in case the journal goes offline. The LOCKSS program enables decentralized and distributed preservation of long-term access to manuscripts. Likewise, it also allows the digital preservation of the authentic versions of the manuscripts.

## AUTHOR INQUIRIES

At any time you can contact the journal through the following email: [revistacientifica@postgradosodontologia.edu.gt](mailto:revistacientifica@postgradosodontologia.edu.gt) you can also check the status of your submitted manuscript or find out when your accepted article will be published.
